(54) SECURITY SERVICE DEVICE AND ITS METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a security service device and its method capable of outputting calling information from a calling terminal to a cellular phone of a subscriber without changing the calling terminal even when a subscriber purchases a new type cellular phone completely different from the previous one as a replacement for the previous one.

SOLUTION: A calling terminal interface 11 receives the calling information generated according to detection of an abnormal condition or a call by a visitor. A controlling means 13 processes the calling information into security information in the form matching the subscriber terminal based on the contents of a contract stored in a database 12. A subscriber terminal interface 14 transmits the security information to the subscriber terminal.
